Summary

I'm a React Developer with 1+ years of experience in creating modern web applications and a passion for creating fast and user-friendly products. I have expertise in all stages of development, from initial prototyping, to developing and testing, to deploying and maintaining solutions. My experience also includes working with React's core features, such as virtual DOM, server-side rendering, and JSX, as well as popular React libraries, including React Router, Redux. By combining my skills and knowledge of the React ecosystem with my strong communicative skills, I'm able to turn ideas into powerful web apps that are both efficient and user-friendly.

****************SKILLS*******************
Collaboration is my strength
Build architecture and design of systems and solutions to meet current and future business needs
Developing new user-facing features
Building reusable code and libraries for future use
Ensuring the technical feasibility of UI/UX designs
Translating business and customer requirements into technology requirements

Experience
